

## Cooling Units Successful in Ocean Spray Packaging Plant

### Washdown Units Keep Variable Drive Cabinets Cool

Pfannenberg washdown cooling unit models proved successful for Ocean Spray on their patented Sweetened Dried Cranberry (SDC) Line. The end-user was in need of Stainless Steel NEMA Type 4X and 460 VAC cooling units and needed a fast delivery date. Pfannenberg products were offered as an option by Control 7, Inc. (a control panel fabrication company) to replace a previously-used competitor's model and selected by the systems integrator, Superior Controls, to be tested on a small phase of the project.

DTS 3081, DTS 3181, DTS 3281, and DTS 3581 Stainless Steel NEMA Type 4X models were used throughout the facility. After Pfannenberg proved to be the best choice with a reasonable price, prompt delivery and consistent performance, Superior Controls has specified these models for use on various other phases of the project throughout the facility.

### The Pfannenberg Advantage - Innovative, Efficient, Reliable

*Electronics are the lifeblood of your operation. Keep them properly cooled and consistently running with proper thermal management.*
